6	<i>FIS/mpm Bills of Material</i> Maintenance Tool.....	9
7	<i>FIS/mpm Documents</i> Maintenance Tool.....	10
8	<i>FIS/mpm Conditions</i> Maintenance Tool.....	11

1 The Solution – Your Benefits

FIS/mpm is an SAP optimization enabling you to **create and maintain almost all master data** – both for sales and purchasing – **easily, quickly and flexibly and to manage it locally** irrespective of the underlying system, i.e. SAP ERP or SAP Retail.

Your benefits:

- Considerable effort reduction and time savings when processing master data
- The Data Exchange function enables even end users to integrate, convert, enhance and retrieve data on their own.
- Full integration in SAP ERP or SAP Retail with complete SAP check routines (field check)
- Sophisticated authorization concept (revision-proof, dual control principle)
- No additional hardware required, therefore cost-efficient solution
- Due to separate data storage in individual *FIS/mpm* tables there is no detrimental impact on the productive data base
- There are no input errors due to standardized inbound interfaces resulting in high data quality
- No data redundancy due to an integrated duplicate check
- Always current master data, prices and conditions
- Single components of *FIS/mpm* also available
- Preconfigured support and maintenance services available

Components:

- *FIS/mpm* Article master, purchasing info record and source list maintenance tool
- *FIS/mpm* Business Partner maintenance tool
- *FIS/mpm* Vendor master maintenance tool
- *FIS/mpm* Customer master maintenance tool
- *FIS/mpm* Bills of material maintenance tool
- *FIS/mpm* Documents maintenance tool
- *FIS/mpm* Conditions maintenance tool
- *FIS/mpm* SD functions maintenance tool

- *FIS/mpm Rebate Arrangements Maintenance Tool*
- *FIS/mds (Master Data Server)*
- *FIS/mpm Datanorm (inbound)*
- *FIS/mpm BMEcat (inbound/outbound)*
- *FIS/mpm SAP PIM Adapter*
- *FIS/cds (Contact Data Server)*

2 FIS/mpm Article Master, Purchasing Info Record and Source List Maintenance Tools

Processes

- For production planning, a new "production version" view has been integrated for master data maintenance. This view can be used to import and maintain master data and to adopt it in SAP, which enables the mapping of master data processes in the production area.
- The view of the customer material info records has been integrated into the evaluation of status updates. Consequently, the user is provided with improved evaluation options to derive respective measures for master data management.
- Only for SAP ERP Retail: The individual view maintenance of the maintenance tool enables the access to the component view to maintain empties BOMs, for instance, as well. This further increases master data quality.
- Only for SAP ERP Retail: When processing article master data from FIS/mpm to SAP ERP, specific default/required entry fields are added from the SAP-MAW1 table if specific requirements are met. Advantage: required entry fields of the listing view are automatically taken into consideration and filled correctly when processing in SAP.
- The Web forms available for master data maintenance can be grouped, which improves usability.
- Workflows for supporting master data maintenance can be processed via a Web interface. Consequently, it is possible to provide data maintenance processes via the Web, which supports mobile working.

Integration

- Further field checks from the SAP standard version have been integrated into FIS/mpm, which increases usability.

3 FIS/mpm Business Partner Maintenance Tool

Processes

- SAP standard summarizes the master data maintenance for vendors and customers via the 'business partners'. SAP S/4HANA will no longer support the SAP vendor and customer master data maintenance transactions.
The business partner maintenance tool provides the same functional scope, convenience and integration depth for master data maintenance as the vendor master and customer master maintenance tools. As usual, master data is created and changed in a staging area. Only after master data release will the master data be adopted in SAP. Business partners can be entered via Web forms. Master data maintenance can be supported by using a workflow.

4 FIS/mpm Vendor Master Maintenance Tool

Processes

- Workflows for supporting master data maintenance can be processed via a Web interface. Consequently, it is possible to provide data maintenance processes via the Web, which supports mobile working.
- In the accounting view, payment terms for vendor credit memos can be maintained, which enhances the master data maintenance spectrum.
- The Web forms available for master data maintenance can be grouped, which improves usability.
- The 'customer material info records' view has been integrated into the evaluation of status updates. Consequently, the user is provided with improved evaluation options to derive respective measures for master data management.

5 FIS/mpm Customer Master Maintenance Tool

Processes

- The Web forms available for master data maintenance can be grouped, which improves usability.
- Workflows for supporting master data maintenance can be processed via a Web interface. Consequently, it is possible to provide data maintenance processes via the Web, which supports mobile working.

6 *FIS/mpm Bills of Material Maintenance Tool*

Processes

- BOM processing has been optimized so that it is now possible, for instance, to maintain several BOM headers with different validity periods, which improves usability.

7 FIS/mpm Documents Maintenance Tool

Processes

- The Web forms available for master data maintenance can be grouped, which improves usability.

8 FIS/mpm Conditions Maintenance Tool

Processes

- The maintenance tool has been enhanced by the master data maintenance of additional conditions, which enhances the master data maintenance spectrum.
- The Web forms available for master data maintenance can be grouped, which improves usability.
