FIS/mpm NextGeneration Release Highlights 2019

1 The Solution – Your Benefits

FIS/mpm NextGeneration (NG) is an SAP optimization perfectly integrated into your SAP S/4HANA system that can be used for **easy, quick and flexible creation, maintenance and local management** of nearly all **master data** – both purchasing and sales master data.

Your benefits:

- Reduced effort and time saving for master data processing
- With the Data Exchange function, the end user can also integrate, convert, improve and provide data independently
- Full integration in SAP S/4HANA with complete SAP check routines (field check)
- Sophisticated authorization concept (audit-compliant, principle of dual control)
- Cost efficiency since no additional hardware is required
- Independence of the operative dataset due to separate data retention in individual *FIS/mpm NG* tables
- High data quality and reduced input errors due to standardized inbound interfaces
- No data redundancy due to integrated duplicate check
- Always up-to-date master data, prices and conditions
- Purchase of individual components possible
- Preconfigured for all industries with support and maintenance

Components:

- *FIS/mpm NextGeneration* Material master maintenance tool
- *FIS/mpm NextGeneration* Business partner maintenance tool
- *FIS/mpm NextGeneration* Documents maintenance tool
- *FIS/mpm NextGeneration* Conditions maintenance tool
- *FIS/mpm NextGeneration* SD functions maintenance tool
- *FIS/mds NextGeneration* (Master Data Server)
- *FIS/mpm NextGeneration* Datanorm (inbound/outbound)

2 FIS/mpm NextGeneration – Material Master Maintenance Tool

Processes

- The material master maintenance tool has been enhanced by a view for the maintenance of material-related documents. This view enables the basic maintenance of respective documents. These basic functions can be enhanced by means of the document maintenance tool.
- The material master maintenance tool has been enhanced by a view for the maintenance of the commodity code.

3 FIS/mpm NextGeneration – Business Partner Maintenance Tool

Processes

- The business partner maintenance tool has been enhanced by views used to maintain and analyze credit management data. This new assignment of views extends the maintenance options of business partner-related data within the tool.
- A view for maintaining business partner-related documents has been added to the business partner maintenance tool. This view enables the basic maintenance of respective documents. The functions can be enhanced by means of the document maintenance tool.

4 FIS/mpm NextGeneration – Documents Maintenance Tool

Processes

- With Release 2019, the document maintenance tool is also available for the NextGeneration version. In addition to the known functions, documents can be maintained via a detail screen. This view contains additional functions and simplifies data maintenance in a clear interface.
- The maintenance of documents can be started via a workflow, which simplifies the organization of document maintenance and increases the analysis options.
- To meet the special requirements of Knowledge Provider documents, you can use the document maintenance tool to maintain more than two versions of these documents. By using optimized views, you can quickly gain an overview of the different document versions and perform simple maintenance.

FIS/mpm NextGeneration Release Highlights 2019

5 FIS/mpm NextGeneration – SD Functions Maintenance Tool

Processes

- With Release 2019, the SD maintenance tool is also available for the NextGeneration version. In addition to the familiar functions, you can also maintain and create data for cross-selling, material determination and listing/exclusion using the free selection known from the condition maintenance tool.
- The maintenance of SD functions can be started via a workflow, which simplifies the organization of data maintenance and increases the analysis options.

6 FIS/mpm NextGeneration – Overall Functions

Processes

- In the NextGeneration version as well, workflows for master data management can be evaluated via the workflow cockpit for analysis and optimization purposes. This allows you to determine the times required for processing workflows or the work items without processor or overdue work items. This enables an improved workflow control for master data management.
