

EFFICIENT SAP MASTER DATA MANAGEMENT with *FIS/mpm*

Quality, convenience and speed in the management of corporate master data

As business decisions are increasingly based on data, a solid master data management is becoming more and more important for companies.

FIS/mpm is an SAP optimization you can use to create, maintain and manage your master data easily, quickly and flexibly, which significantly increases data quality.

The assurance of high data quality and efficiency in data provision are key infrastructural prerequisites for the success of your company.

Quality data in purchasing and procurement

Your purchasing-relevant data particularly includes purchasing info record, article data, source list, rebate, prices, conditions and vendor master or business partner master.

The FIS optimization for master data enables the convenient creation, maintenance and quality assurance of this data. The data is maintained locally outside the production system

(staging area). Only after successful validation and execution of integrated check routines will the data be transferred to the SAP production system.

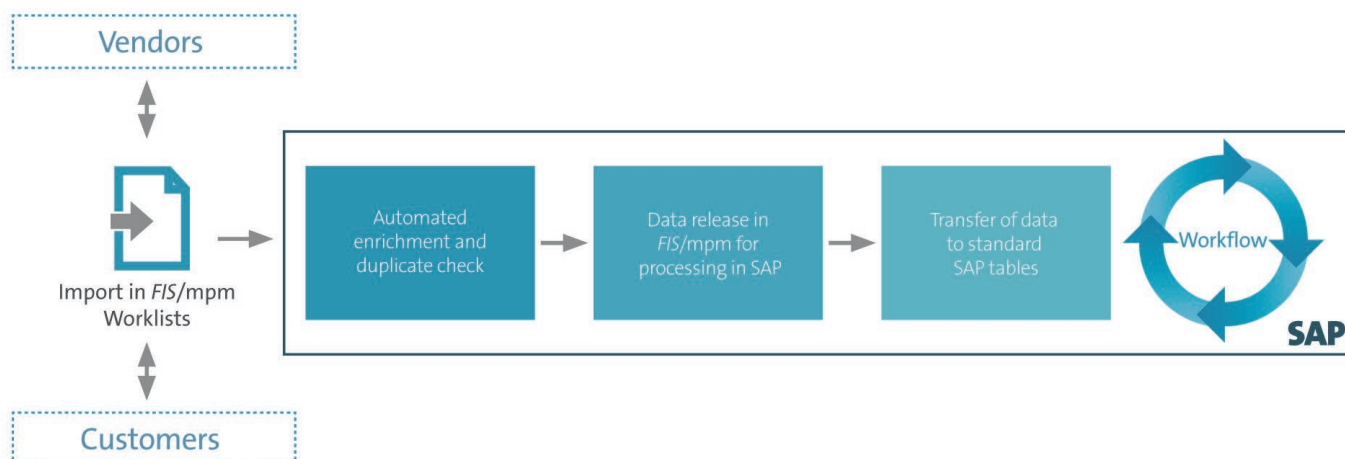

Master data management within production

Your production business processes are based on various master data, which requires a management of master data.

FIS/mpm can be used to easily and quickly create and maintain bills of material, production resources and tools, production versions and inspection setups in the material master. The FIS solution saves time and reduces costs when it comes to maintaining your production data.

Up-to-date SD master data

Your SD-relevant master data, such as rebates, conditions, sales BOMs, customer or business partner master as well as specific SD functions (e.g. cross-selling), material substitution and listing or exclusion will also become more profitable using a solid master data management.

The FIS master data maintenance tool enables the easy, transparent and uncomplicated maintenance of this master data, which substantially optimizes your order entry in the sales process.

Contact harmonization across system boundaries

The FIS solution supports the central management of your address and contact data of business partners (vendors and customers) and the use of a CRM solution, such as SAP Hybris Cloud for Customer, is a meaningful amendment.

REFERENCES

HIGHLIGHTS

- Full integration in SAP
- Compliance with high quality standards through SAP certification
- Individual software solution tailored to your corporate-specific requirements
- Solution for the international use
- Future-proof through sustainable release strategy
- Compatibility with other FIS solutions

BENEFITS

- Security and transparency in your master data processes
- Increasing productivity and revenues due to automated master data management within your business processes
- High data quality for optimized customer and vendor processes
- Enabler for digital transformation and Big Data

FIS Informationssysteme und Consulting GmbH

FIS Informationssysteme und Consulting GmbH is an expanding and independent enterprise and the parent company of the FIS Group, which employs more than 700 employees making companies more modern, economic and competitive every day. FIS focuses on SAP projects and the development of efficient solutions promoting digitization within companies. As one of the leading value-added SAP resellers in Germany, Austria and Switzerland, FIS is the market leader in technical wholesale with the all-in-one FIS/www solution. Together with its Medienwerft subsidiary, FIS covers the complete range of SAP topics in the field of Customer Experience (CX).

More than 100 specialists operate and administer the customers' SAP systems in the FIS-ASP subsidiary data centers in Southern Germany. The FIS-SST subsidiary is the competent partner for nearshoring projects. The FIS-iLog subsidiary develops collaborative solutions for the convenient and secure process management of different companies on shared platforms.
