

FIS/mpm for Master Data

EFFICIENT SAP MASTER DATA MANAGEMENT AND IMPROVED DATA QUALITY

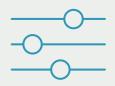

Secure and transparent master data processes

Continuous processes thanks to seamless SAP integration

High efficiency and data quality through automated workflows

Individual adjustments to your requirements

As business decisions are increasingly based on data, a solid master data management becomes more and more important for companies.

FIS/mpm is an SAP optimization you can use to create, maintain and manage your master data easily, quickly and flexibly, which significantly increases data quality.

The assurance of high data quality and efficiency in data provision are a key infrastructural prerequisite for the success of your company. The optional analysis tool manually checks the data quality or independently automates and initiates the maintenance process.

QUALITY DATA IN PURCHASING AND PROCUREMENT

Your purchasing-relevant data particularly includes purchasing info record, article data, source list, rebate, prices, conditions and vendor master or business partner master. The FIS optimization for master data enables the convenient creation, maintenance and quality assurance of this data. The data is maintained locally outside the production system (staging area). Only after successful validation and execution of integrated check routines will the data be transferred to the SAP production system.

The optional FIS/mpm shadow database is used as an external data basis, where larger datasets are managed outside the ERP system for subsequent processes. In doing so, you considerably reduce the costs for data retention, maintenance and creation of articles.

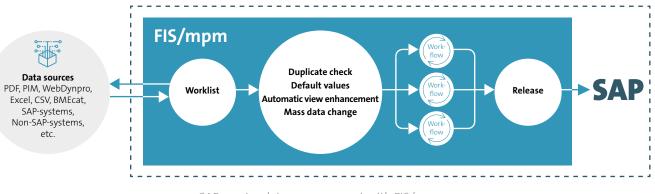

MASTER DATA MANAGEMENT WITHIN PRODUCTION

Your production business processes are based on various master data, which requires a management of master data. FIS/mpm can be used to easily and quickly create and maintain bills of material, production resources and tools, production versions and inspection setups in the material master. The FIS solution saves time and reduces costs when it comes to maintaining your production data.

UP-TO-DATE SD MASTER DATA IN SALES AND DISTRIBUTION

Your SD-relevant master data, such as rebates, conditions, sales BOMs, customer or business partner master as well as specific SD functions (e.g. cross-selling), material substitution and listing or exclusion will also become more profitable using a solid master data management.

The FIS master data maintenance tool enables easy, transparent and uncomplicated maintenance of this master data, which substantially optimizes your order entry in the sales process.

SAP master data management with FIS/mpm

AI IN MASTER DATA MANAGEMENT

The use of artificial intelligence makes your master data management even more efficient. The process of importing master data, for instance, can be made faster and automated using self-learning mappings. The intelligent mapping by FIS enables you to assign external files that would require a new mapping directly in the SAP system using an innovative classification procedure. The time-consuming manual definition of new mappings is no longer necessary and you save time.

FIS/mpm HIGHLIGHTS

- Full integration in SAP
- Compliance with high quality standards through SAP certification
- Individual software solution tailored to your corporate-specific requirements
- Solution for international use
