High-Performance Basis for Digital Innovations

SAP BUSINESS TECHNOLOGY PLATFORM

FIS

| Flexible extension of the SAP standard outside the core | Basis for scalable applications | Uniform look and feel thanks to Fiori interface | Availability without Provision of own hardware |

In the networked world, companies have to connect their business areas digitally in order to stay competitive and keep up with the market. This requires the implementation of flexible and agile applications that are consistently integrated in the business processes and that support the full digitization of these processes. This brings about company-wide and efficient end-to-end processes ensuring competitiveness and innovative power also in the future.

A high-performance technological basis is essential for the implementation of individual business applications and future-proof system enhancements. In its function as a platform-as-a-service offer, SAP Business Technology Platform (SAP BTP) provides a high-performance

and secure basis for the initial development of new business applications as well as for application development to enhance SAP Business Suite without changing the digital core. In addition, SAP BTP offers numerous preconfigured tools, for instance for the implementation of new technologies, such as machine learning.

Development of innovative business applications based on SAP BTP

SAP BTP is the high-performance innovation platform by SAP to develop individual business applications. The focus is always on agility and flexibility of the developments in order to prepare companies and their business

processes for the requirements of the digitized and networked world. It therefore offers the optimal basis for implementing digital innovations that are tailored individually to corporate needs and processes. The SAP Fiori user interface guarantees highest user-friendliness and, consequently, maximum user acceptance.

High-performance integration platform for individual enhancements of SAP Business Suite
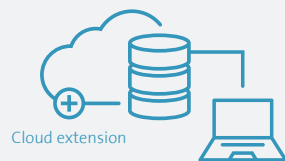

The existing (on-premise and cloud-based) SAP system landscape can be enhanced individually on the basis of SAP BTP. The applications developed on SAP BTP are seamlessly integrated into the SAP systems and are used to adjust SAP Business Suite to the corporate business requirements without changing the digital core.

The HANA-in-memory database guarantees highest security and performance. As Enterprise Cloud Platform, SAP BTP provides preconfigured tools and toolsets, which facilitate the development of agile and flexible applications as well as the integration of new technologies or Predictive Analytics.

FIS/bxp - Business Extension Platform based on SAP BTP

Business Extension Platform (FIS/bxp) provides FIS SAP users with advanced cloud solutions. FIS/bxp is based on SAP BTP. The applications offered complement the SAP standard version without interfering into SAP Core (side-by-side approach).

The FIS/bxp applications can be optimally integrated into your SAP landscape, relieve your users and guarantee even more efficiency due to advanced user interfaces and intuitive operation.

Examples of cloud solutions on FIS/bxp:

- **FIS/TradeFlex – connection of online marketplaces to SAP**

   Based on SAP BTP, FIS/TradeFlex seamlessly integrates online marketplaces into SAP. FIS/TradeFlex reduces manual efforts to a minimum and automates all relevant steps in the sales process: from product placement via billing and payment process to potential back processing and returns delivery.

- **FIS/bxp Open Document Exchange**

   The FIS/bxp Open Document Exchange application simplifies the exchange of electronic document data between wholesale and craft. Via a central platform, wholesalers manage their document flows digitally, such as the transfer of order responses and delivery notes. This creates transparency and forms the basis for automated processes. User-friendly apps and dashboards provide an even more detailed overview.

- **Individual developments of business applications**

   The FIS experts create tailor-made business applications for your individual needs. Based on your business processes and your digitization strategy, they implement innovative solutions that enhance your existing SAP landscape individually.

On the basis of FIS/bxp, our cloud solutions convince with user-friendly user interfaces and smart functions.

THE FIS-GROUP

FIS Informationssysteme und Consulting GmbH is an expanding, independent company and forms the umbrella of the FIS Group. Within this group, more than 800 employees work to make companies more modern, more economical and more competitive every day.

FIS focuses on SAP projects and the development of efficient solutions that drive digitization in companies. As one of the leading SAP system houses in the D-A-CH region, FIS is the market leader in technical wholesale with its complete solution FIS/wws.

Together with its subsidiary Medienwerft, FIS covers the entire range of SAP topics for the customer experience (CX) sector.
