The specifications and information by FIS Informationssysteme und Consulting GmbH contained in this document are without obligation and non-binding. The information represents only an extract and reflects the current status. FIS expressly reserves the right to make subsequent changes to these specifications and information.

The specifications and information in this document represent confidential information of FIS and must be kept secret by the receiver. In particular, the passing on of these specifications and information to third parties is prohibited.

RELEASE-HIGHLIGHTS *FIS/fci*

THE APPLICATION AND ITS BENEFITS

The *FIS/fci* optimization as part of *FIS/edc* can be used to automatically enter **paper documents** or **electronic documents**, such as PDF documents, in the existing SAP solution. Document characteristics, such as vendor name, address, phone, fax, bank details and tax number, are automatically matched with the master data record in the ERP system.

Excellent recognition rates are achieved using an extensive **test methodology**. Of course, *FIS/fci* is suitable for all typical documents in companies, such as invoices, order responses, delivery notes and orders.

Your benefits:

- Genuine free form recognition
- High recognition rates as from the first invoice
- Self-learning system (knowledge base)
- Vendor recognition > 95%
- Reading of item data
- Automatic check: e.g. art. 14 UstG (sales/purchases tax law); totals, taxes, country-specific requirements, etc.

▪ Processing of eInvoicing documents

- For overall processing of all invoice documents, eInvoicing documents can now be recognized as well. These documents are recognized by the SoloIMES application and forwarded to the respective process. Electronic invoices can now be further processed via an on-premise *FIS/eInvoicing* application or via FIS Cloud Service. As a consequence, an entry channel can be used for all invoice types and overall evaluation across all invoice types is enabled.

▪ Document-based processing

- To improve the flexible application of cloud correction, additional functionalities have been complemented in the cloud application. This, for instance, includes the support of vendor-specific settings and user management.

▪ Integration into Office 365

- To also enable the use of Office 365 mailboxes and benefit from the increased security mechanisms against attacks, an integration into Office 365 has been implemented in *FIS/fci*.

▪ Schedule-controlled collection of mails

- To enable faster processing of incoming documents, multiple times for processing mails and block intervals can be defined in the scheduler. This enables a more flexible and demand-driven processing configuration to process messages in a timely manner and, nevertheless, skip phases of high utilization or maintenance times for instance.
