FIS/wws NextGeneration

THE APPLICATION AND ITS BENEFIT

FIS/wws NextGeneration (NG) is the industrial solution for technical wholesale and compound groups based on SAP S/4HANA. To meet the requirements of this industry sector, we have particularly optimized and amended functions in Sales and Distribution as well as in Purchasing and Procurement within SAP Operations. As a specialized provider, we deliver numerous wholesale-specific additional functions that complement the SAP standard version.

The industry-specific configuration of *FIS/wws* NG reduces adjustment efforts and implementation time. *FIS/wws* NG used in combination with SAP S/4HANA is the optimum support for technical wholesale business processes. Since 1996, we have permanently enhanced *FIS/wws*, which is currently used by more than 35,000 SAP users.

Your benefits:

- Shorter processing times than in the SAP standard system
- High functional scope due to numerous additional functions
- Easy handling
- High productivity
- Field-tested services
- Modern and open architecture
- Sustainability, independency, scalability
- User association enables influence

RELEASE HIGHLIGHTS *FIS/wws* NextGeneration

2021/Q1 – Latest developments

General information

▪ Outbound delivery of Fiori roles (FI, CO, MM, SD, LES, EWM)

- For daily use in the business areas of finance, controlling, purchasing, sales and distribution and logistics, relevant transactions can be called as tiles in the Fiori Launchpad.

Enhancement and optimization

▪ *FIS/Express* delivery service provider: check for missing phone number

- For special delivery options (e.g. express), the express delivery service provider requires the customer's phone number. During label creation, the Web service would report an error during data transmission. This function is used to provide the Web service with missing phone numbers (such as dummies).

▪ Mapping of the route ID (xRechnung)

- "Route ID" is provided in the general data of the business partner master for xRechnung.

▪ Web service availability of ARGE

- An interface to the ARGE Web service was created to "query price and availability" and "query order status" from the manufacturer.

▪ *FIS/wws* NG SD document monitor

- The SD document monitor is integrated into the *FIS/wws* NG standard delivery for an overview of all SD documents and their status.

2021/Q1 – Latest developments

- **SD document entry: option of copying items**
 - Existing order items can be copied to a new item in the document. This serves to save time, especially with disposable items.
- **Integration of SAP S/4HANA embedded EWM**
 - To be able to delimit transactions for SAP EWM, the determination of a unique confirmation control key (confirmation of own order vs. inbound delivery trigger) is enabled in the purchase order and selected automatically.
 - A report is provided for goods issue posting depending on the *FIS/wws* NG loading list status. The goods issue is not posted until the status is "completed". The loading list status is not included in the SAP standard version.
 - The express delivery service provider processing has been optimized for SAP EWM. This means, for instance, that label printing can be triggered from SAP EWM.
 - Relevant fields (material master data) is transferred from *FIS/mpm* for SAP EWM.
 - An EWM framework has been developed, making it faster and easier to integrate *FIS* optimizations and customer-specific adjustments.
