The specifications and information in this document represent confidential information of FIS and must be kept secret by the receiver. In particular, the passing on of these specifications and information to third parties is prohibited.

RELEASE-HIGHLIGHTS *FIS*/xee NextGeneration
THE APPLICATION AND ITS BENEFITS

The **connection of business partners**, such as customers, vendors or authorities, enables you to optimize the data exchange and, as a consequence, the information flow across company borders. Processes, such as purchase-to-pay, can be digitized by means of an EDI solution. This increases the degree of automation of your business processes throughout the company as well as your productivity.

FIS uses *FIS*/xee for EAI, EDI and API Management to connect your systems and business partners inside and outside the company. As a consequence, you create a consistent system landscape that makes you more future-oriented and competitive.

Your benefits:

- Optimization and acceleration of the information flow across company and application borders
- Continuous concatenation of your business processes due to the avoidance of media changes
- Intensification of your business relationships and increase of customer retention

- Permanent availability
- Reduction of error rate since no manual data entry required
- Reduced costs through saving of packaging material, postage and fax costs
- Sustainable and flexible system enhancement through the efficient integration of cloud applications and services

FIS

RELEASE-HIGHLIGHTS *FIS*/xee NextGeneration

- **Improved usability through navigation tree**
  - A navigation tree has been implemented for improving the navigation within the *FIS*/xee Subsystem user interface. which can be collapsed for greater clarity. A history overview is displayed with the most recently used applications for quick access to frequently used applications.

- **Visualization of XRechnung**
  - To simplify the processing of XRechnung, *FIS*/xee will be able to create a visualized invoice image of XRechnung in the future. This invoice image can be stored relative to the document in the SAP system and is therefore available for easier and clearer further use or control of the invoice.

- **Office 365 integration**
  - Sending and receiving e-mails in the environment used has been extended. The Office 365 mailbox can be used in *FIS*/xee as both an inbound and outbound channel. As a consequence, the high security standards of the Office mailbox can be used.

- **Additional evaluation options for transmissions**
  - To track the performance or duration of transmissions and mass data transmissions, new fields have been added to the overview screen. Using this data, it is possible to determine what the runtime of a particular transmission was. Based on this data, comparable transmissions can be better scheduled. By exporting this data, it is possible to analyze in the long term how optimizations have worked and whether there have been any changes in the performance of the transmissions.
