The specifications and information by FIS Informationssysteme und Consulting GmbH contained in this document are without obligation and non-binding. The information represents only an extract and reflects the current status. FIS expressly reserves the right to make subsequent changes to these specifications and information.

The specifications and information in this document represent confidential information of FIS and must be kept secret by the receiver. In particular, the passing on of these specifications and information to third parties is prohibited.

RELEASE-HIGHLIGHTS *FIS*/fci
THE APPLICATION AND ITS BENEFIT

The *FIS*/fci optimization as part of *FIS*/edc can be used to automatically enter **paper documents** or **electronic documents**, such as PDF documents, in the existing SAP solution. Document characteristics, such as vendor name, address, phone, fax, bank data and tax number, are automatically matched with the master data record in the ERP system.

Excellent recognition rates are achieved using an extensive **test methodology**. Of course, *FIS*/fci is suitable for all typical documents in companies, such as invoices, order responses, delivery notes and orders.

Your benefit:

- Genuine free form recognition
- High recognition rates as from the first invoice
- Self-learning system (knowledge base)
- Vendor recognition > 95%
- Reading of item data
- Automatic check: e.g. art. 14 UstG (sales/purchases tax law); totals, taxes, country-specific requirements, etc.

FIS

RELEASE-HIGHLIGHTS *FIS*/fci

- **Procedure and architecture optimization**
  - Numerous FCI procedures have been revised and optimized with the 2021 Release. The basic architecture has been restructured to enable an efficient integration of future developments into the product.

- **Solo-IMES**
  - In order to fulfill the high safety requirements in the mail traffic, authentication procedures are constantly optimized and adjusted. Solo-IMES forms the interface to on-premises e-mail inboxes and cloud providers. It provides an option to fast adapt new procedures and, as a consequence, benefit from the new standards.
  - Solo-IMES is a Windows-based software solution that can read mails from mailboxes. The mails and their attachments are analyzed. If the software identifies the mail and its attachments as documents, these will be transferred to the *FIS*/fci system. The documents are read there and passed on as structured documents to a connected SAP system or a similar system. The use of SOLO-IMES requires a license adjustment.

- **Web-based correction**
  - Flexibility and distributed work centers increasingly become standard features. For this reason, the correction of documents is now offered as a cloud application. As a consequence, an installation on work center PCs is no longer required. In this way, users can access the application irrespectively of their location.

2021 – Latest Developments

- **Separate updatability**
  - In order to accelerate future updates and increase the application's efficiency, the recognition engines and the main application will be installed separately. As the recognition engines contain new features considerably less frequently, they do not have to be considered for an update of the main application.

- **Configuration editor**
  - To simplify essential settings, a configuration editor has been developed. A validation is used to identify whether they are correct. The system indicates errors and warnings in visualized form.
